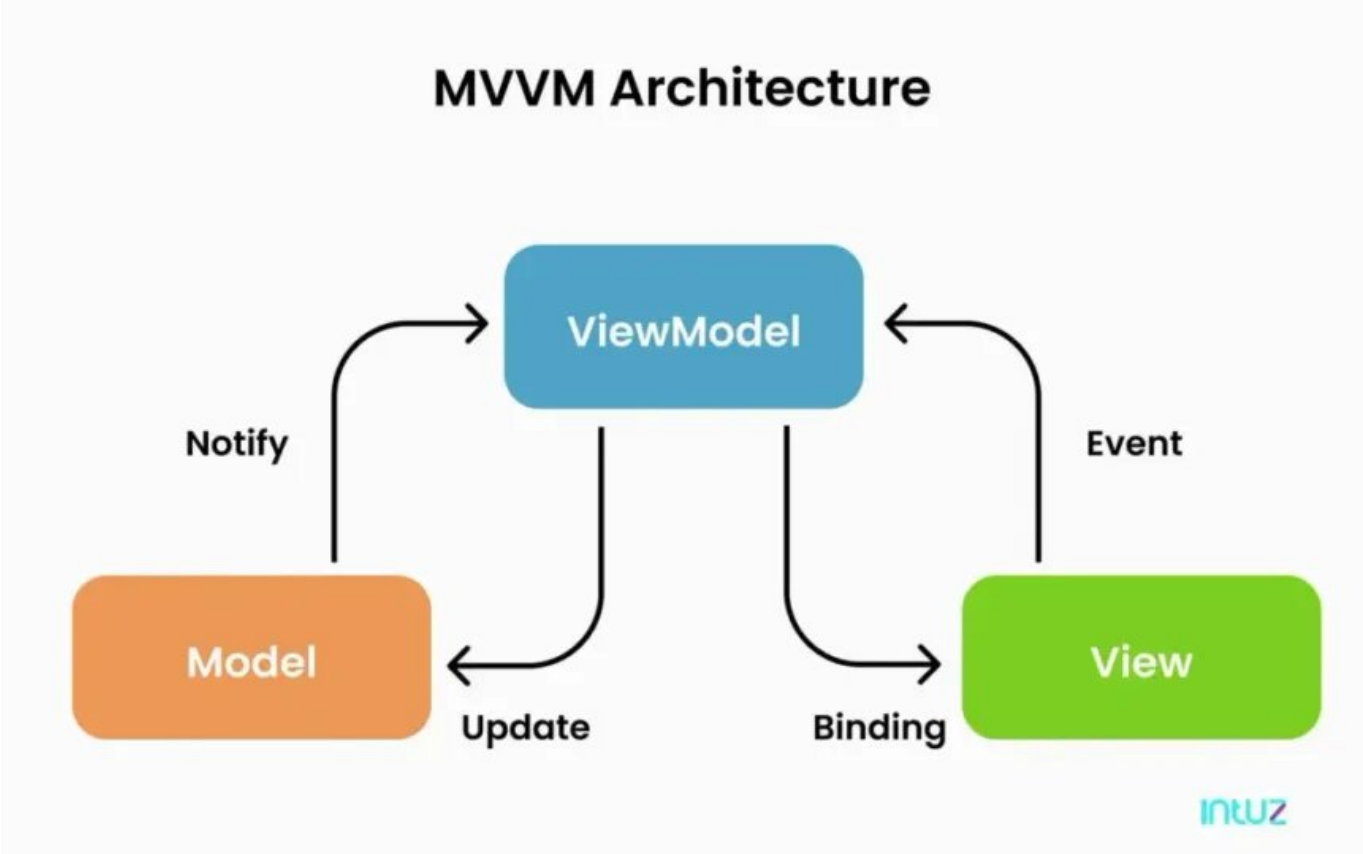
Image 1: img1.png



Of course, I'll describe this image in detail.

The image presents a structured diagram titled "MVVM Architecture" in bold, black text at the top, offering a clear visual representation of the Model-View-ViewModel pattern with its initials. Centered in this diagram is a rounded blue box labeled "ViewModel." This central component serves as the bridge between the Model and the View, facilitating communication along three primary data flows.

Below the MVVM label, a network of interconnected black lines illustrates these interactions:

On the left, an orange box labeled "Model" connects to the ViewModel. This represents the core application logic that the ViewModel communicates with through "Notify" arrows and "Update" arrows, allowing changes in the model to propagate to the model's state.

On the right, a green box labeled "View" also connects to the ViewModel, symbolizing the user interface that consumes and represents the Model. The View "implies" events from the ViewModel into itself, indicated by a "Binding" arrow.

The entire diagram is designed with a minimalist style on a clean white background. All text is in a simple, sans-serif font, ensuring clarity and readability. This layout is encased within a larger orange box, giving it a cohesive, distinct appearance. In the bottom right corner, a small logo reads "intvz" in gradient, adding a subtle branding element.
